

ALVT

Vortex Flowmeter

ALVT Series

GENERAL

Vortex flow sensing technology relies on measuring the number of vortex pulses generated by a bluff body immersed in the flow stream. The vortex meter uses dual sensor technology, producing two independent vortex signals which allows for signal amplification and common mode noise reduction. Our sensors never touch the process fluid; the crystal sensors are bonded behind a stainless steel wall. The electronics pick up the slightest pressure pulsations generated by the vortices through the stainless steel wall. This design allows meters to have an extremely wide turndown while maintaining an almost unlimited upper end and a high pressure rating. Our sensor is the thinnest wafer vortex on the market. The meter body bolt lengths are shorter to allow for better flange alignment and tighter, leak-free installations. Our insertion models are uniquely designed so as to prevent miss-alignment of the bluff body in the flow stream; a common problem with many other brands of insertion vortex meters on the market.

FEATURES

- Suitable for a wide variety of applications having steam, gas, or liquid medias
- No moving parts and no leak paths; no o-ring or graph oil seals to wear, fail or leak
- Two independent sensors, allowing for better signal amplification and noise reduction
- Error messages displayed for erratic flows and flows outside of calibrated ranges
- Field calibration possible with integral or remote electronics and keypad
- True 2-wire 4-20 mA interface
- Wide measuring range, turn-down ratio of 10:1
- Available as an integrated mass flow vortex
- Area of measurement can be smaller than pipe connection for better rangeability

SPECIFICATION

| | | | |
|------------------------|--|-------------------------|---|
| • Process Connections: | Wafer (standard), Flanged | • Housing protection: | IP65; IP67 |
| • Process temperature: | -20~+180°F (-5~+250°C) (with LCD display) | • Cable: | 10 m free for remote version |
| • Operating pressure: | 232 psig (1.6MPa) standard; up to (428 psig) 6.4 MPa optional | • weight (approximate): | Wafer: 22~29 lbs (10 ~ 13kg) to 12" (DN300) Flange: Flange weight contact factory |
| • Velocity Range: | Depends on fluid, pressure and temperature | • Signal Interface: | RS485, HART |
| • Liquids: | 2~20 ft/s (0.6~6 m/s) | • Display units: | m³/h, kg/hr |
| • Gas & Steam: | 23~148 ft/s (5~65 m/s) | • Keypad: | Rate, Total |
| • Accuracy | 1.0% for liquid, 1.5% for gas and steam | • Power supply: | 110/220 VAC or isolated 14~36 VDC |
| • Repeatability: | 0.33% for liquid, 0.5% for gas | • NIST traceable: | Yes |
| • Turn down ratio | 10:1 | • Data storage: | EPROM storage up to 5 years |
| • Material: | Stainless Steel #304 | • Data logger: | Reading, sampling times 0.5 S |
| • Signal output: | Pulse output, 2-wire 4~20mA DC, VDC, RS485, Hart, ModBus | | |
| • RAM Back-up | Lithium Battery, 3.6VDC | | |
